

SDI Review Form 1.6

Journal Name:	International Blood Research & Reviews
Manuscript Number:	Ms_IBRR_38064
Title of the Manuscript:	Myoglobin elevation as an early prognostic index in stable patients with chronic kidney disease
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Is there any link between renal insufficiency and elevated myoglobin in terms on pathophysiology even if mortality has been found to be elevated among CKD patients with elevated myoglobin. Just want to know if the sample is the same as the CK MB study from the same university.	Thank you for your valuable comments. Several studies have linked renal insufficiency to elevated myoglobin levels (Discussion, lines 162 – 163). Studies relating mortality to elevated myoglobin levels are sparse. However, some studies have indicated that myoglobin is not a predictor of mortality in CKD patients (Discussion, lines 170 – 171). Yes, the sample is the same as the CK-MB study from the same University.
<u>Minor</u> REVISION comments	NONE	
<u>Optional/General</u> comments	NONE
