PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The authors attempt to establish a relationship between the blood group and the type of hematological cancer in the study population. There are several methodological limitations to achieve this objective. It is a retrospective and retrolective study, therefore establishing an association with this model is difficult, to achieve this study the ideal methodological model would be a prospective cohort. On the other hand to establish a relationship with this model, the sample size is very small so the authors cannot find a relationship between the blood group and the type of hematological cancer. The present study can only establish a description of the frequencies of the different blood groups in each type of hematogenous cancer	The title of the study as well as the objectives have been rephrased to reflect the study design and the parameters that can be determine from it.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
