General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

(<http://www.sciencedomain.org/page.php?id=sdi-general-editorial-policy#Peer-Review-Guideline>)

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	1) Why is the positive titre of 21-25 years old higher than other ages? 2) This study says that males level are higher than females. The authors should indicate the reason in the concrete. The authors say that females stand on poor health condition and environmental factors. However, the readers in other countries are impossible to know the reason. At least, the reviewer can't understand concretely the reason at all. 3) In males, O is higher than H. On the other hand, in females, H is higher than O. Why is the reason?	➤ The reason stated already (See line 175-176) ➤ Reason given in line 184. ➤ previous studies said about higher prevalence in female than male (17, 20).
Minor REVISION comments	Nothing	
Optional/General comments	This manuscript indicates good point of infection. The revised manuscript shall be published.
