FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
It is a detraction from the original manuscript to write adipocytokine rather than adipokine.	Thanks a lot for your valuable criticism and On the bases of your first recommendation and after research we found that adipokines and adipocytokines are two words with the same mean but adipocytokines is the best to be used in our work. ((Interestingly some adipokines also exhibit features of cytokines or regulate inflammatory responses, and so these two groups of adipose-derived factors are often collectively referred to "adipocytokines")) 1- Cao H1.
