

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_28351
Title of the Manuscript:	Oils of Nigella sativa L. and Cinnamon zeylanicum inhibit the testicular cytotoxicity and genotoxicity induced by mancozeb in rats
Type of Article:	Original research papers

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The recommended suggestions have not been properly followed up. The recent references suggested have not been included in the text. The Discussion is too large and could have been substantially reduced as suggested in the reviewer's comments. The concept behind selection of the doses of mannose for the study is still not very clear in the revised manuscript.	Thank you for your great and valuable comments. 1. All the suggested references are inserted in the "introduction" section. 2. The "discussion" section is reduced as possible according to the reviewer's comment. 3. The dose of mancozeb is referenced in this revised manuscript by reference number (19) and its solubility in corn oil is by reference number (20).
