SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	"Diagnostic significance of icteric index" is a well written manuscript that attempts to determine and evaluate the icteric index of serum samples correlating it with total bilirubin level; also determining if this index can be used as a biomarker. Introduction, Methodology and Results are well written and concise, explaining in a correct way the importance aspects of each of these topics. Discussion is also well written, but I suggest a better analysis of the international literature, in order to compare the results with other papers.	
<u>Minor</u> REVISION comments	Abstract is too long and have to be written in accordance to Author Guidelines.	
<u>Optional/General</u> comments
