

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_30912
Title of the Manuscript:	Coffee and Caffeine Consumption in Reproductive Functions of Adult Wistar Rats
Type of Article:	

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Dear authors, You have now responded to my remarks. I thank you. You have made new corrections, not all those I had proposed, but the most important ones such as $P < 0.05$, and change of 'recommendation'. You have not included my idea about the general effect of caffeine which explains that on the fertility. I have checked everything: the corrections made are more numerous than those not made. Since the readers will not know these not made corrections, they will not be able to note the lacking. I think thus that the paper can be accepted for publication, and consequently I give it the overall mark of 8/10. However, please could you: - use the same order for the subtitles in the Material and Methods section, for the solution of caffeine and that of coffee - present the figure 4.2 at the same dimension as the other figures, that is a little larger - and if you can, add my idea at the end of your Discussion section ? I thank you in advance for making these small improvements, and I send you all my very best wishes, Your referee	Thank you for your comments and concerns. Am impressed at your constructive contribution to this work. However, - We think the subtitles in the materials and methods section are different for caffeine and coffee solutions. Can't see any need to order them as same, even though I have corrected the numbering. This is OK by us. - As requested, Figure 4.2 (now Figure 3.2-following correct numbering) as been set to the same dimensions as other figures. - Your Idea is quite good and appreciated. However, we don't think it's necessary to implement it in the discussion of this work, as our specific objectives have been meant, and the point we intended to drive to readers have been discussed. Thanks once more. Best wishes from us.
