Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Honestly, I am not sure that the authors have written any scientific paper prior to this one. The discussion section is very confusing. Punctuations are not correctly used. Initially I was trying to correct using track changes. But I got confused along the way. This work needs serious major revision if it will be accepted and authors need to consult a native English language speaker for correction Superscripts letters should be on the mean and not on standard deviation. Please note that the editor may over rule my decision on this paper but I suggest rejection
