

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_39569
Title of the Manuscript:	Ameliorative properties of the chloroform stem bark extract of Abrus precatorius against gentamicin-induced renal damage in rats
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Manuscript still needs improvements in the discussion section. Abstract – ok Introduction and aims – ok Methods – ok, but there is any fingerprint for the plant? Results – improvements on the description of the results are mandatory, as requested at first review. Discussion – better description on the possible mechanistic pathways underlying nephroprotection should be provided, as requested at first review. A last paragraph should be added with a clear and concise conclusion, which gives to the reader a clear idea.	I don't know what answer to give to this sir The results have been further described I did a bit of this sir A concluding paragraph has been added
