

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_42377
Title of the Manuscript:	EFFECTS OF SESAME SEED ENRICHMENT ON PHYSICO-CHEMICAL AND NUTRITIONAL CHARACTERISTICS OF FLOUR FROM TWO CULTIVARS OF WHITE YAM (<i>Dioscorea rotundata</i> Poir)
Type of Article:	Original research article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. The title is better than the old one 2. Corrected some word errors. 3. The AYF, EYF and SSF seem to be combined analysis. If done like this, it's made wrong. Different products are not analyzed together. 4. When sesame is harvested it is not known (Fresh or not) 5. Some of the values in the summary section of this article are not available anywhere. for example 1.6-3.0 * 61.7-78.8 6. The most important, Which of 8 samples did you recommend exactly in results parts	1. Thank you for approving the title. 2. It had been effected. 3. The AYF, EYF and SSF are not combined analyses. It was done separately as each sample different from one another. 4. The product was brought to the market for consumers so knowing the time of harvest can be impossible but it was fresh as at the time of purchase. 5. This has been corrected, it was an over-sight. 6. The recommendation from the conclusion was gradual increase of sesame seed as these improve the physic-chemical and nutritional characteristics of the yam.
