

SDI Review Form 1.6

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_44205
Title of the Manuscript:	Phytoremediation of Crude Oil Polluted Agricultural Soil Using Schwenkia americana and Spermacoce ocymoides
Type of the Article	Original research papers

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	A 12 week study in a natural environment must entirely be controlled by atmospheric conditions. The season in which the study should be mentioned. The temperature profile must be represented parallel to the change in the TPH or PAH. Any degradation process for the hydrocarbons must be accompanied with a change (or rather increase) in moisture content as one of the main products of the degradation. Moisture determination in such a study is useless or at least not significant.	The suggested corrections have been made and indicated. The moisture content was there as a guide and for future referencing.
<u>Minor</u> REVISION comments	The main procedure of the study was not given in details and hence the discussion could not cover the real problem	This suggestion has been taken care of.
<u>Optional/General</u> comments
