

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_35257
Title of the Manuscript:	Hepatic lipase influences plasma lipid profiles and lipoprotein ratios in Lagos University Teaching Hospital patients with Ischemic stroke
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
- Abstract should be more informative about the way controls and cases are split to 3 groups (i.e. authors should mention the difference between groups 1,2,3 and the difference between groups 4,5,6). Authors still failed to mention the differences in the revised manuscript. Introduction: - There is no need to put general information like definition of CVD or how blood clots and thrombi cause ischemic stroke as they serve nothing to support the aim of the study. Authors insist on putting such information when it is not relevant to the work done and it is well known to even non-medical persons and serves nothing to the purpose of the study and so should be removed. This is a link to an article to aid the authors in the future: https://www.elsevier.com/connect/11-steps-to-structuring-a-science-paper-editors-will-take-seriously - Table 1 actually belongs to the methodology section because it describes cut-offs and does not include results. There is an overlap of numbers in table 3 (at the row of TG in the old version now the 95% CI is empty instead of overlapped). N.B. CI is written as CL and should be corrected. - Authors responded to query about other risk factors: "We have result for them, but it was not shown.". please add to the results section because these are very important data.
