

SDI Review Form 1.6

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_37135
Title of the Manuscript:	Phytochemical Screening and Antimicrobial Activity of Herbal Extracts
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound. To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Include the scientific name of the plants. In the introduction, explain CLEARLY why, among so many extents, you chose this 3 for testing. Was it due to ethnopharmacological use? Due to material availability? Etc... Explain better the relevance of the focus you choose to the antimicrobial activity. Why the textile application and not the development of antimicrobial drugs? Explain the selections of these bacteria to be testes. Are they more common in textile? In the methodology create a topic for statistical analysis, where you will describe how it was done and how the results were expressed (mean + standard deviation, median, quartile, etc.). The conclusion need to me more objective. Discuss how the factors listed on lines 214-217 may have influenced your exposure.	
Minor REVISION comments	In the methodology in abstract, it seems that you evaluate only the presence of phenolics, but you evaluate the presence of other compounds. Correct the phrase in methodology. Include, in the title, that the antimicrobial activity is applied to textile use. Would not it be interesting to do a simple fractionation in the extracts? To try to evaluate which compounds are related to the activity? If it has not been done or can not be done, quote this in the discussion as a next step to better assess the observed effect.	
Optional/General comments
