SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	➤ Pg. 2 male wister is not male wistar? ➤ Table 2. Column lymph%. It can be noted increases but from a statistical point of view are they significant or not? If the mean and sd have been calculated, the degree of significance between the control group and the experimental ones can also be obtained! ➤ The authors were also remarked and with other recently published papers (2017, if I not wrong) related to the action of various plants who can bring benefits both: to the body and to stimulating growth, which is why they probably forgot to change the name of the plant in Tables 3 and 4. In the present paper it is about <i>Telfairia occidentalis</i> not about <i>Ocimum gratissimum</i> ➤ Differences between groups, from the values obtained of researchers appear to be significant, especially between the control group and the group that received 15% (attention <i>Telfairia occidentalis</i> not <i>O.gratissimum</i>). In the table missing degrees of significance	
Optional/General comments
