

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Biochemistry Research & Review
Manuscript Number:	Ms_IJBCRR_44232
Title of the Manuscript:	Lipid peroxidation and Antioxidant Enzymes Assessment in Alloxan Monohydrate Induced Hyperglycaemic Male Wistar Rats following Oral Administration of Theophylline and Glibenclamide
Type of Article:	

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Now, the manuscript looks better. Just a few corrections need to be carried out. -The running title for table 1 and table 2.1 (make it table 2 instead of 2.1) must be on top of the table and not at the bottom of the table. Only for figure, the title will be written at the bottom of the figure. -Look at reference number 14 and make it uniform like other references. -Please refer to the last sentence of the introduction section 'Therefore.....glibenclamide' In your correction note you did mentioned that glibenclamide was used as a positive control but here (in the last sentence of introduction) as the aim of your study, you mentioned 'evaluating lipid peroxidation and antioxidant enzymes status in alloxan monohydrate induced hyperglycaemic male Wistar rats treated with theophylline and glibenclamide' just remove glibenclamide from this sentence and only focus on theophylline as the aim of your study since glibenclamide has been done before. The way you have written give impression that both glibenclamide and theophylline have not been studied and this confused me. Mention glibenclamide clearly as a positive control in material and method section. -Please add at least one sentence in the opening of section 2.1.5 and then place the table. It is not encouraged to place the table directly under the main title of the section and open a new title next. Must have some elaborations regarding the table 1 in section 2.1.5
