SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	1. Reason (s) for hospital selection? Can the author provide brief description of the hospitals mentioned in the study? Do these hospitals represent a particular place in the island nation of Trinidad? 2. In relation to #1, can the author elaborate on line #75 - random stratified methodology? 3. Table 2 - diet and lifestyle were mentioned in the results and conclusion however it was not discussed. I think the fact that the subjects were diabetic, their diet and lifestyle are vital in the discussion. 4. There are some vague statements e.g # 184-185 " when infected of injured"?, # 215-217 "possibility existed that they required support □financially or emotionally previously and were now getting the required attention due to their ".....? 5. Further discussion on lifestyle and high % of foot lesions□, does their work, lifestyle contributes to high incidence of foot lesions? Since the patient are diabetic, how come prevention of foot lesions are not implemented? Is it part of culture perhaps? 6. Better to add ethics permit number, code or series in the methodology? 7. Line # 226 - knowledge was mention... can the author elaborate on this because it was stated but it was not reflected in the data results? 8. Line # 35 Narayaning should be Cawich et al based on list of references 9. Line #237 should be "The economic impact of..." 10. Line 245 et all should be deleted and all authors should be cited 11. Line # 81 correlation was mentioned in the methodology but variables were not correlated in the results and discussion	
Minor REVISION comments	1. Line # 116 - how many patients did not monitor their situation? 2. Line #135 - most were sad.. how about those who were not sad? how many in terms of % or number and reason (s) why they were able to cope? 3. Line # 137 - any idea with regards to the source of their information? 4. Line# 66 - elaborate importance of examining concerns of patients 5. In the abstract, LEA should be stated as lower extremities amputation 6. Line # 54 (LEA) lower limb amputation should be lower extremities amputation	
Optional/General comments	The study is interesting. Results may be used by the government or non-government organizations in finding solutions or strategies to ease burden of patients and also prevent Db in the long term. Diet and lifestyle must be explained/discussed much further in the study.	

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight
