

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Medical and Pharmaceutical Case Reports
Manuscript Number:	Ms_IJMPCR_25429
Title of the Manuscript:	Rare fracture of coronoid process along with zygomatic complex fracture- a case report
Type of Article	Case study

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<ol style="list-style-type: none"> 1. Photograph quality will not improve. 2. Post operative picture should be made available for clinical evaluation of the results as told 'satisfactory' in description 3. Post operative mouth opening photograph will be beneficial 4. Isolated arch fractures can be treated by elevation alone, but zygomaticomaxillary complex fractures preferably need to be fixed. <i>In your case existing laceration present on the right malar region would have given you easy approach without any fresh scar for fixation & better results.</i> 5. Arch bars placement and Intermaxillary fixation is NOT AT ALL MENTIONED in original as well as revised manuscript. <i>Is it done after reading review?</i> 	<p>Thanks for your comments. We are sending the post operative pictures as an attachment to the email</p> <p>We are sending the post operative mouth opening photograph as an attachment to the email. Thanks for your comments. We agree with your opinion. However we operated the case by following the protocol of our institute. However we will keep in mind your opinion in the treatment of such cases in future. We are sorry for not mentioning the arch bar placement and intermaxillary fixation.</p>
