SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	<ol style="list-style-type: none"> 1. As is, it is difficult to see the benefit on the teres major treatment group compared to the control. I suggest the following: Use graphs to show this, place pain at the end – showing the benefits first. 2. It appears that while range increased significantly when teres major work was done, pain and GROC measurements were the same. You should comment on this in the discussions. 3. You probably are writing a little too much about the soft tissue technique in the discussion. The bit about Travell can go in the introduction. Write a little more about the results of your study. 4. You did the Constant Murley test, but there were no changes in this functional measure. You need to comment on this. 	<p>Point 1: A graphic was included</p> <p>Point 2: Commented, lines 252-258</p> <p>Point 3: Changed to introduction section</p> <p>Point 4: Commented, lines 246-251</p>
<u>Minor</u> REVISION comments	Line 152 – you spelling alpha “alfa”	Edited
<u>Optional/General</u> comments
