**SDI Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b><u>Compulsory</u></b> REVISION comments		
<b><u>Minor</u></b> REVISION comments	Ethical issue- There is no statement of research ethics board approval.	A statement has been made to that effect and the research ethics board which approved this study appropriately mentioned
<b><u>Optional/General</u></b> comments	The manuscript is of very low quality and is full of technical inaccuracies. The first statement reads "Blastomycosis dermatitidis..." where the actual species name/genus is "Blastomyces dermatitidis". The authors fail to recognize that blastomycosis is caused by two species of Blastomyces. Blastomycosis infection occurs world wide; however, is more common in certain regions. The references do not support many claims made by the authors. The authors mention that the case occurred out of the area of endemicity but do not mention where the case occurred.	The quality of the manuscript has been improved markedly and the worldwide distribution of Blastomycosis is acknowledged. The statement about its distribution has been correctly re- framed. Typographical errors have been corrected. The references have been updated and case area in question has been mentioned in the text.
