SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The manuscript "Skin as a site of recurrence in carcinoma ovary-an unusual presentation" is an interesting one because skin metastatic disease is a very uncommon situation in ovarian cancer. However, the authors must emphasize in the case report that the skin lesion is not on the site of any drain that had positioned during surgery although they explain it in the Discussion.Local examination and CECT abdomen showed complete response & CA-125 was 30.46 IU/ml. Patient was once again kept on periodic follow up. In Jan 2016 a solitary firm nodule of 3x3 cm was detected on left lower flank which was non-tender and fixed to skin (Fig-1). Careful enquiry and review of operative records showed that the nodule didn't develop on the site of drain positioned during surgery nor was it close to incision sites.....
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
