

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	Ms_IJPSS_24674
Title of the Manuscript:	Estimation of Regional Evapotranspiration based on Tri-Angle Method Using Thermal and VNIR Data.
Type of the Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Please find my response to this evaluation in the revised paper.	<p>The location map have been modified now everything has its legend. The third window represent a natural satellite image in true colours for the whole study area. This area is a group of center pivot units and a small area irrigated by the drip irrigation system and this explanation was already existing before in the study area description (sec. 2.1, line 107). We have implemented the proposed procedure on the whole study area presented in the third window but in line 275 and 276 we noted to this and noted to that we viewed the part which contain the three center pivot units “round by red in the third window” ,which used for validation strategy, just for more better view. We wish that the modifications satisfy you.</p> <p>We have implemented the suggestions enough on the Fig.1 although the respond for these suggestions explained before in the text line 107, 275 and 276 and i highlighted it.</p>
