

Editorial Comments:

I have a few comments to the authors. In my opinion, the Table 2 should be presented in a graphic illustration.

I consider that authors should add to the Table 2 illustrative material, such as photo of fruits treated by GA3 and Yogen foliar fertilization (experiment) and untreated by plant growth regulators (control).

Author's Feedback:

However, in my opinion I think the data in table 2 should be present in Table suitable than in graphic illustration. Because the data in table 2 not only fruit weight but also have alot data in fruit length, fruit diameter, Peel thickness, Edible percentage with different unit. So if we use the graphic illustration we must separate a lot of graphic for each data. Therefore, I think we should keep the data as show in Table 2.

The photo of fruit in the experiment already added in the article
