

SDI Review Form 1.6

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	Ms_IJPSS_27098
Title of the Manuscript:	Selection of salt- tolerant triticale (× Triticosecale Wittmack) and genetic variation assay for agronomic and physiological traits
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	<ol style="list-style-type: none"> 1. It would be nice to include root related traits to understand the mechanism of tolerance to salinity 2. The maximum toxic level of salinity should be included as control 	
<u>Minor</u> REVISION comments	Explain why triticale is resistant to salinity as compared to the wheat genotypes.	
<u>Optional/General</u> comments	<ol style="list-style-type: none"> 1. The clustering activity might not give clear pictures as the number of genotypes are small in number. 	-Yes, the reviewer is right but performing clustering was better than ignoring that as our objective was categorizing triticales response under salinity stress.
