

Editor's Comment:

In general, I support the publication of revised Manuscript with authors' corrections added according to reviewers' remarks in the [International Journal of Plant & Soil Science](#).

But in my opinion, authors should specify reference on statistical analysis of data obtained in the chapter "Materials and methods" and add photo of experimental

seedlings obtained from different year old seeds of coriander of fifteen genotypes in the chapter "Results and Discussion".

I support publication of revised Manuscript after addition of authors' corrections according to my comments in the [International Journal of Plant & Soil Science](#).
