

Editor's Comment:

"In this article, the author has studied the effect of solid cattle manure on soil structural/physical properties. The topic of this study is not novel as this is a well established fact that organic matter or animal manure improves soil structure. However, the author has specifically studied the effect of solid cattle manure on soil structural properties using four treatments in both cultivates and uncultivated fields. The manuscript was peer-reviewed twice and the author modified the article accordingly. Now, the article is worth publishing, however, there are a number of language and grammatical errors that need to be corrected. The Editor should annotate a proofreading copy for the author by suggesting him grammatical/language corrections. My decision about this article is "Accept", provided grammatical and language corrections are made".
