

Editor's Comment:

I have looked at the referee's report and at the paper, I have reached a decision regarding the submission to International Journal of Plant & Soil Science.

In my opinion, this manuscript does not bring any scientific novelty, substantial improvement or advantage over existing methods. I cannot recommend this paper for publication, as it does not meet the quality requirements for an scientific manuscript. The presentation is very unclear as to the approximations and approaches used and results obtained. The presentation should be statistically improved, and it might be that its usefulness would then become clear, but I am not optimistic about that. I recommend the author to give the manuscript to any experimentalist in the field to check whether it is readable." I suggested some corrections on the text.

I regret to inform you that this paper is not suitable for publication in International Journal of Plant & Soil Science.
