

SDI Review Form 1.6

Journal Name:	International Journal of Plant & Soil Science
Manuscript Number:	Ms_IJPSS_33086
Title of the Manuscript:	Host Efficiency of Scutellonema Bradys in Yam Companion Crops in Nigeria
Type of the Article	Original Research Article

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments		
Minor REVISION comments	<p>Title: "Host Efficiency of Scutellonema Bradys in Yam Companion Crops in Nigeria"</p> <p>Suggestion: Host susceptibility of Scutellonema Bradys in Yam Companion Crops in Nigeria"</p> <p>Methodologie</p> <p>1. Naturally infested field soil ($P_i = 3200$). Comment: the population of <i>S. bradys</i> in the soil is never so high. Suggestion: this is not possible. Can you cite any paper which says that the population of <i>S. bradys</i> in the soil can be high as here?</p> <p>2. crops: It is important to specify the varieties if possible. Otherwise, it will be difficult to repeat your experiment.</p>	<p>The soil was obtained from a yam field, where a high damage of harvested tubers was recorded, and was sampled, shortly after the yam harvesting was done, so it is possible to have a high population in such case. The P_i was also based on soil volume of 5000 cm^3 of soil meaning that an average of 128 nematode were extracted from the 200 cm samples</p> <p>The varieties will be specified</p>
Optional/General comments
