Journal Name:	**International Journal of Plant & Soil Science**
Manuscript Number:	**Ms_IJPSS_34265**
Title of the Manuscript:	**Alterations Induced by Cowpea Weevil Callosobruhus maculatus F. (Coleoptera: Chrysomelidae) Infestation on Seed Germination Potential and Nutrient Quality of Vigna aconitifolia (Jacq.)**
Type of the Article	**Original Research Article**

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty'**, provided the manuscript is scientifically robust and technically sound.

SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments		
Minor REVISION comments		
Optional/General comments	This paper investigated the effect of *C. maculatus* infestation on the seed germination potential and nutrient quality of *Vigna aconitifolia* under different types of soil. The parts of results and discussion clearly explained how the *Vigna aconitifolia* was affected using the experimental data. I only have one question: why don't you compare the significant difference of seed germination under different type of soil(Table2). It looks that the clay soil is very different from other soil types.
