**SDI Review Form 1.6**

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b><u>Compulsory</u></b> REVISION comments		
<b><u>Minor</u></b> REVISION comments		
<b><u>Optional/General</u></b> comments	The manuscript lacks of scientific rigor to be considered acceptable to a magazine devoted to disseminating new findings based on the scientific method. The authors express their results on the basis of chemical analyses in several soil samples, but do not develop a hypothesis. The authors also did not develop a statistical design with different experimental treatments to test the hypothesis, and there is also no discussion of the results. I believe that the article has valuable information that can be published in magazines of technical divulgation, which will certainly be very useful for professionals and farmers in the area studied.
