PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The work seems good to me, only that these are from 2012-2013, I would like if possible to present current data, since the climatic change can raise the data presented and the constitution of the land and the amount of rainwater.	This is my doctoral research work. That's why, I have written that year.
Minor REVISION comments	In the discussion of results, mentions that in the highlands where the largest crop is developed, but at the same time mention is made of the loss of rainwater due to runoff and deep percolation, how is the irrigation water retained.	All correction done.
Optional/General comments	Consider that including a discussion of results would give the missing value to the article	All correction done.
