PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Manuscript (agronomy-124830) "The Phenology Of Flowering And Ripening Of Almond Cultivars Nonpareil, Texas, Ferraduel And Genco In Herzegovina" presents the results of the flowering evaluation inn Herzegovina. These results could be of great interest for almond breeding programmes (mainly in Central Europe). For these reasons, this manuscript is interesting for the publication in International Journal of Plant & Soil Science. However, the important defects in the form and the style in the exposition and discussion of results made this manuscript acceptable for the publication in International Journal of Plant & Soil Science after MODERATE REVISION. Essentially, the manuscript is too short and some times repetitive in the description of the state of the art and in the exposition and discussion of the results. This manuscript has to be extended ADDING NEW REFENCES IN THE Introduction and in the Discussion of results.	We agree with your suggestions and comments. We corrected the research paper.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
