

Editor's comments:

1. In-depth improvements in quality of language needed.
2. Moreover, Abstract needs some conclusions at the end.
3. Additionally, MS should be divided into "results" and "discussion".

Author's feedback:

1. OK. Noted
2. OK Done
3. The MS section shouldn't be divided into result and discussion reasons being that the data Wouldn't be understood by reader. In Soil fertility and plant nutrition journal organization, articles "results" and "discussions" goes simultaneously for harmonization.
