

Editorial Comments:

Prevention of endodontic mishaps is always better than correction. Though placement of Rubber dam is an established and mandatory rule in endodontics it is not much followed. Case report on such mishaps will be an eye opener for practitioners and will be thought provoking.

Author's Feedback:

Accidents happen when proper rules are not followed. The purpose of this article is to reinforce the use of rubber dam and this case report is a learning lesson for the dental practitioners.
