

Editorial comments

Title: Spatial Modelling of Fever Prevalence and Suspected Malaria Cases among Children: A Cross-sectional Study

I have 6 comments on the manuscript: **IJTDH #13191**.

Please correct the manuscript and respond each comment precisely.

I recommend the authors to revise the manuscript, IJTDH #13191 and to resubmit it.

1] Citation & references throughout the text;

The way to make reference number is incorrect as a professional researcher/scientist.

2] p.6;

Line 8 on page 6 should be fixed.

3] Lines 17-18 on p.10;

The sentence should not be indented. The sentence should not be center. Those should be fixed.

4] p.14;

The last line of one sentence does not mean anything. The sentence should be merged.

5] Conclusion;

Clearly state the **limitations** of this study.

6] Conclusions;

Clearly state policy **implications** of this study. The current statement is very shallow.

Authors' feedback:

1] Citation & references throughout the text;

The way to make reference number is incorrect as a professional researcher/scientist.

This is corrected. Reference that is cited first is given number [1], that cited second if given number [2], etc.

2] p.6;

Line 8 on page 6 should be fixed.

This is corrected. Sentences are clearly stated.

3] Lines 17-18 on p.10;

The sentence should not be indented. The sentence should not be center. Those should be fixed.

This is corrected.

4] p.14;

The last line of one sentence does not mean anything. The sentence should be merged.

This is corrected. Sentences are merged.

5] Conclusion;

Clearly state the **limitations** of this study.

This is done.

6] Conclusions;

Clearly state policy **implications** of this study. The current statement is very shallow.

This is done.
