

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	Ms_IJTDH_18956
Title of the Manuscript:	Laboratory Evaluation of Clinical Bacterial Isolates for Detection of Carbapenemases-Producing Enterobacteriaceae in Kano, North West, Nigeria.
Type of the Article	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
The study is interesting. It can give baseline information on some parts of the world (Kano, Nigeria) that Carbapenemase is now present and already increasing. It may not be numerous as seen, but it's a start. However, this study will be simpler to understand if the manner of writing will be corrected. I have suggested some using red marks but there are paragraphs that really need to be rephrased or improved.	Yes agreed. The study is very interesting and will give baseline information. The study indicated the presence of Carbapenemase but not numerous with an increasing tendency. The manner of writing has now been corrected based on the suggestions and some of the paragraphs are rephrased and improved.
