SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	This is a descriptive study whose design corresponds to a prospective series of cases where a group of subjects one year after hospital discharge is evaluated and described its evolution after that time. No infer causes. Although the results show some degree of damage 1 year after hospital discharge, the number of cases is very small and not infer whether it was the H1N1 influenza or severity of disease requiring ICU, causing the deterioration of respiratory, renal and cognitive function, independent of diagnosis. It would be interesting to design a case-control study for comparing ICU patients diagnosed with H1N1 and other causes at one year follow up.	Dear Reviewer, Many thanks for your comment about the study and I do appreciate your comment . But it is not feasible to conduct a new study with these same patients. Most important I do not reside in the same country any more.
<u>Minor</u> REVISION comments	It provides useful information to generate a hypothesis study.	
<u>Optional/General</u> comments	English correction is required.
