SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	- Since the authors have included individuals aged from 18 to 82, I strongly suggest to authors evaluate the importance of deeper stratification of the individuals. The circadian cycle is indeed influenced by the age. In this sense, the physiological functions are also altered. - After this stratification, the data for statistical analysis will necessarily be changed. - The authors must to consider the above observations in the discussion. - How about the obesity	The suggested stratification of the participant's age has been done, and the change in statistical analysis has been effected in the results and the discussion. Obesity has been discussed in the discussion
Minor REVISION comments	- Typos - There is a work including patients in the same conditions and in the same place. I wonder if it could be considered as util at the discussion section (Association between Snoring and Indices of Oropharyngeal Space among Adult in a Community in South West Nigeria. Ogunkeyede et al., 2014. http://www.researchgate.net/profile/Oyedunni_Arulogun/publication/274078672_Association_between_Snoring_and_Indices_of_Oropharyngeal_Space_among_Adult_in_a_Community_in_South_West_Nigeria/links/55153bdd0cf2f7d80a3298f4.pdf)	The typographic errors have been corrected and the suggested reference has been used in the article
Optional/General I comments	The manuscript is indeed relevant, but major revisions must be presented.	The major revision has been effected .
