

SDI Review Form 1.6

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	2014_IJTDH_14660
Title of the Manuscript:	ANTI PLASMODIAL ACTIVITY OF BEE STING IN <i>PLASMODIUM BERGHEI</i> INFECTED MICE
Type of the Article	

General guideline for Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

To know the complete guideline for Peer Review process, reviewers are requested to visit this link:

	Line 65. Dam, Minna (not <u>Dam,Minna without a gap</u>) Line 66 honey and fruits Line 68. The groups were labelled as;.... Line 70. And group 4 (not group4) Note. Animal grouping does not correspond with that in the abstract. 20 mice were divided into 5 groups each consisted of 4 mice. Please include the fifth group that is the uninfected untreated group. Line 72. A donor mouse which had been infected with Plasmodium berghei was anaesthetized and the blood... Note. What was the percentage parasitaemia of the donor mice? How many parasites were contained in 0.2 ml? Please make it clear for readers. Note . Please know that thick smear is not use for parasitaemia counting. Kindly review this aspect and state the right thing. Line 82. The experimental mice were treate as follow:... Line 84. Please indicate the date of commencement of treatment with chloroquine and how was it administered? Line 85/86. Please indicate the date of commencement of treatment with bee sting and how was it administered? How safe is the administration of this bee sting without poisoning the animal? Treatment before infection is prophylactic test while infection and treatment on the same day is suppressive test. Please give detail of the method used for each group. Lines 90 and 91 should be deleted Line 93. Group 1 was the.....

SDI Review Form 1.6

	Line 94. Group 2 was the..... Line 97. Microscopically at magnification of x100 to determine..... Note. Please indicate the date and duration blood from the tail of each mouse was collected for staining parasites counting. Lines 103 to 109 should be deleted Line 112. This period were recorded. The blood..... Note. Please indicate how you calculated the mean survival time for readers. Line 118. Dacie and Lewis 1991 is not in reference list. Line 148. Figure 1. Changes in parasitaemia of mice infected with <i>P. berghei</i> on day 0, treated on day 3 to day.... There should be detailed description of parasitaemia on daily basis. Please present the table showing the percentage chemosuppression of the curative as in table 1. The graphical result showed that bee sting is more effective than chloroquine. How true is it? Line 155. Table 1. <i>In vivo</i> antiplasmodial Activity of Honey Bee Sting Against <i>P. berghei</i> There should be a figure or table showing Changes in parasitaemia of mice infected with <i>P. berghei</i> on day 0, treated on same day (day 0 –) Line 166. Survival days of 17 and 15 days respectively (20 days not shown on table) Line 175. Indicate the values of the parameters in brackets. Line 176. Shows significant ($p < 0.05$) increase Line 178. Statement is contradicts the values shown in
