PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
1. Please have a critical look at the tables (statistical analysis), some of the figures seem erroneous. A few are highlighted in red in the track attached manuscript. 2. Confidence interval are usually given in ranges not as absolute values. 3. Please decongest your tables with values of two decimals preferably and three occasionally. 4. Odd ratio, confidence interval and p values are presented using the format. For example [OR=2.14; 95% CI(1.32 - 4.70); P=0.003] 5. Are the details about how the sample size was collected required by the editors or reference could just made of the formula used and prevalence from other studies?
