PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	1. Study area description should include settlement pattern, climate, temperature, humidity etc, factors that make intestinal parasites thrive for ease of rich discussion. 2. Discussion should be revisited to take care of the corrections pointed out.	The settlement pattern, climate, temperature and humidity of the study area have been included . Meanwhile, these are intestinal parasites that have little or nothing to do with climate unlike the geohelminths. Factors such as personal hygiene which include toilet types and feeding habits of the subjects have been discussed in the manuscript. These play significant roles in transmission of intestinal parasites than the climatic factors.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
