SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	Thank you for giving me the possibility to review this manuscript. It is an interesting manuscript that gives important knowledge about clients knowledge of cause and preventive measures for childhood immunizable diseases. In the abstract there is information about which dates this study took place for data collection, but I lack this information in the methodology section in the main manuscript. In the methodology section I also like to know more about the Exil Interview Questionnaire. How many items have the instrument, and how many (if any) subscales? When was it validated and how this validation process was done? You discuss the importance of maternal attainment of primary education for good knowledge of the cause of childhood immunizable diseases. When it comes to the recommendation of health education, is this primarily education to mothers?	This has been included. See Lines 86 and 87. This has been done. See Lines 118 to 123 and highlighted in yellow. The validation was done by the originators of the questionnaire. Public enlightenment and also health education of the mothers during immunization visits.. See conclusion in the abstract section and the main work.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
