

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	Ms_IJTDH_26669
Title of the Manuscript:	Prevalence and Risk factors of Urinary Schistosomiasis in the Ikata-Likoko area of southwest Cameroon
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Good work. Discussion: I disagree with authors claim that quoting value during discussion is repetition of results or table content. Authors should note that when presenting information to readers on prevalence or incidence rate without quoting value to establish authors claim; it is incomplete information. Also, it makes communication flow and it brings unity in research presentation. I suggest authors should add value to all prevalence rates. Authors should consider manuscript for other minor corrections Reference: <i>et al.</i>, should be remove in reference.	Authors appreciate comments of reviewer. Discussion: Values have been added on all prevalence rates as recommended by the reviewer Other minor typographical and grammatical errors have also been corrected throughout the text and we think that the manuscript is now better than the original. Reference: Authors have not removed the "et al" in references in accordance with the guidelines to authors for the journal style and recommend the guidelines for the reviewer's perusal. The section on referencing style under the General guidelines for authors in the journal website stipulates that where there are many authors, the first six (6) authors should be listed followed by et al.
