FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Table 2: Each category should be analysed on Yes or No basis so that we can know the proportion of those aware or not In the discussion, lines 316-385 have no reference. All the discussion within these lines are more or less like repeating and expatiating on what has already been said in the result. The author should look for literature to compare and contrast the study findings with. Apart from recall bias, other possible biases were not mentioned as well as measures in protecting such biases All the issues stated above must be properly addressed.	Table 2 has been analysed on Yes and No basis; Line 237 to 265. The statement has been referenced; Line 384 to 385. The manuscript was reviewed for bias. The opinion of the authors is that the only bias that can be described as such is on the choice of study institutions all being within the health sector. This in our opinion has been addressed in Line 116 to 126 whilst a subsequent larger study included all sectors. All issues raised have been addressed by the authors.
