SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment:	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Good work but need few review and resubmit. Abstract: Authors should give brief introduction of the topic. Introduction and Methodology: Consider manuscript. Results: Table 1 did not contain any vital information except frequency of subject in each age group. I suggest that authors should include positive subject with self medication and non medication in each age boundaries as part of the table. Also, authors should test the following variables such as Education, Occupation and Trimester against self medication and non medication. This will further strengthen the research work. In addition, authors should present all this variables on the table. Discussion: Review of research outcome will have positive impact on presentation. Authors should consider manuscript for others. References: Journals should be abbreviated.	Agreed Agreed We have included self-medication practice and non self-medication against the various demographic variables as suggested. We also included X^2 test for comparing self-medication and non self-medication versus Education, occupation, parity etc.
<u>Minor</u> REVISION comments	Yellow tinted should be considered for corrections and red texts are suggested corrections.	
<u>Optional/General</u> comments	Research work contributes to knowledge.
