SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	Though the manuscript is well written, but needs some corrections, which I have highlighted. Please don't start the sentence with number or percentage. Please merge this within the sentence. It would have been better if the dermatophytes were identified up to species level. Anyway, it is fine if this is not possible. In children below one year, tinea cruris should be differentiated from diaper dermatitis due to candida. I wish culture was done.	In our results, no children less than one year found to be affected by one of SFI, Tinea cruris was found only in one patient in age group from 0-6 years, and he was 2 years old, confirmed with culture (Trichophyton rubrum)
<u>Minor</u> REVISION comments	Please rewrite references in a uniform style & the name of the journals/books should be written in the style given below. HavlickovaB,CzaikaVA,FriedrichM.Epidemiological trendsinskin mycoses worldwide. Mycoses. 2008;51 Suppl 4:2–15. Rippon JW. Dermatophytosis and Dermatomycosis. In: Medical Mycology: The Pathogenic Fungi and Pathogenic Actinomycetes. 3rd ed. Philadelphia, PA: Saunders; 1988:169–275. Journal name should be written as Braz J Microbiol Instead of Brazilian journal of Microbiology	References were rewritten as advised
<u>Optional/General</u> comments	Some clinical photographs or mycological photographs should have been included.
