SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<u>Compulsory</u> REVISION comments	Unfortunately the content of this manuscript is too simple for publishing. In my mind analysis only of haematological parameters is not enough for valid conclusions. For acute hepatitis more important parameters for prognosis are AST (ALT) levels, bilirubin and prothrombin time(INR), The authors should extend the work with comparison of haematological with these parameters.	These parameters(liver enzymes and coagulation profiles) are already part of routine tests in acute hepatitis investigations. The aim of study to represent the importance of haematological parameters to be included in routine investigations in our country.
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments
