SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The authors present data of a seizures scenario in a tertiary care teaching hospital in India. This medical record highlights that this kind of retrospective studies are crucial to address the problem of epilepsy in a particular region. This work is conceptually very interesting but unfortunately this manuscript has a number of important concerns. -In my opinion, this is a case report more than a research article. The results of this study are merely descriptive and I do not believe that they can contribute anything new to the fundamental issue. -The statistical point in Material and Methods section need to be completed. The authors should to explain in detail the statistical analysis done in this study. -The English must be improved. Please have your manuscript checked by a native English speaker before sending the revised version to correct the numerous grammatical errors and to improve the way sentences are organized.	Thanks for the time reviewing our manuscript and the constructive comments. The cases are really more to be included as case study. Moreover as per the journal article types, our manuscript is fitting under original research article if you consider this as a medical record based retrospective study or research. Also the title of the manuscript is edited now as per suggestion by one reviewer. Revised title: Seizures scenario in a tertiary care teaching hospital in Odisha, India-- A retrospective study In the revised manuscript, we have now stated clearly about the statistical analysis done in this study (under Materials and Methods section). We have corrected the English wherever we could. All the changes in text are highlighted in purple color. However if any further error is specified then we will be able to correct those.
