

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	International Journal of TROPICAL DISEASE & Health
Manuscript Number:	Ms_IJTDH_29675
Title of the Manuscript:	Ergonomics Workstation Assessment of Musculoskeletal Disorders in University of Port Harcourt
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
Going through the questionnaire, the level of measurement is ordinal. Parametric analysis may not be appropriate. Other comments are as indicated in the manuscript.	Comment 01: Additional work regarding workstation and development of MSDs has been added for justification as suggested and highlighted in blue. Comment 02: Suggestion Effected. Comment 03: Suggestion Effected. Comment 04: Suggestion Effected. Comment 05: Suggestion effected and highlighted in blue. Comment 06: It was necessary to compare results of Kendall's w-statistic with that of ANOVA. Both evaluations are for staff and students. Table 6 confirms consistence in degree of response between staff and students. We want to believe that the reviewer is very knowledgeable on statistical analyses because there is a place for ANOVA in our data analysis. Comment 07: Suggestion Effected.

SDI FINAL EVALUATION FORM 1.1

	Comment 08: The non-parametric analysis employed is Kendall's w-statistic and its results have to be supported with “consistency test”, that is the essence of ANOVA test (see our response on Comment 06). Comment 09: See response to Comment 08. Comment 10: Additional list of references (5Nos) have been made. Text references have been cross-checked and agree with the list of references. References are in line with SDI format
