SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	Please clarify the ethical issue: approval was obtained from the Chief Medical Director of the University Health Centre. Informed consent of the study subjects was sought from the students before samples were collected from them	
Minor REVISION comments		
Optional/General comments	After reviewing this manuscript, my comments are: To talk about the Malaria and its causal agents are very important. This disease is distributed worldwide and causes annually a high percentage of death. To give an idea about the ABO, Rhesus factor and malaria susceptibility or resistance is good - There are many repetition (details and numbers in the text are the same in the tables! As well as in the discussion!) - The references used are good. But there are many mistakes when citing references in the text
