SDI Review Form 1.6

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	The title should be revised because the author does not identify a suitable frequency of administration PZQ (in the introduction it says that it is already recommended in some cases). The study is testing the effectiveness of the six-month treatment in 4 villages of the Senegal River Basin.	
<u>Minor</u> REVISION comments	Standardize the text to use tables or tableau. The populations of the first and second intervention were changed? In table 2 the number of boys and girls is different in the first and second survey. It was to have been done with the same people?	
<u>Optional/General</u> comments	This manuscript is relevant for proposing interventions to areas with high prevalence of schistosomiasis.
